

# TETRA COM: Technology Transfer in Computing Systems

FP7 Coordination and Support Action to fund 50 technology transfer projects (TTP) in computing systems. This project has received funding from the European Union's Seventh Framework Programme for research, technological development and demonstration under grant agreement n° 609491.

## Wearable Multifunctional Body Sensor (MedSens)

Roman Trobec, Aleksandra Rashkovska, Viktor Avbelj, Matjaž Depolli, Tomaž Krištofelc, Klemen Bregar; JSI, Slovenia  
Boris Simončič, Saving d.o.o., Slovenia

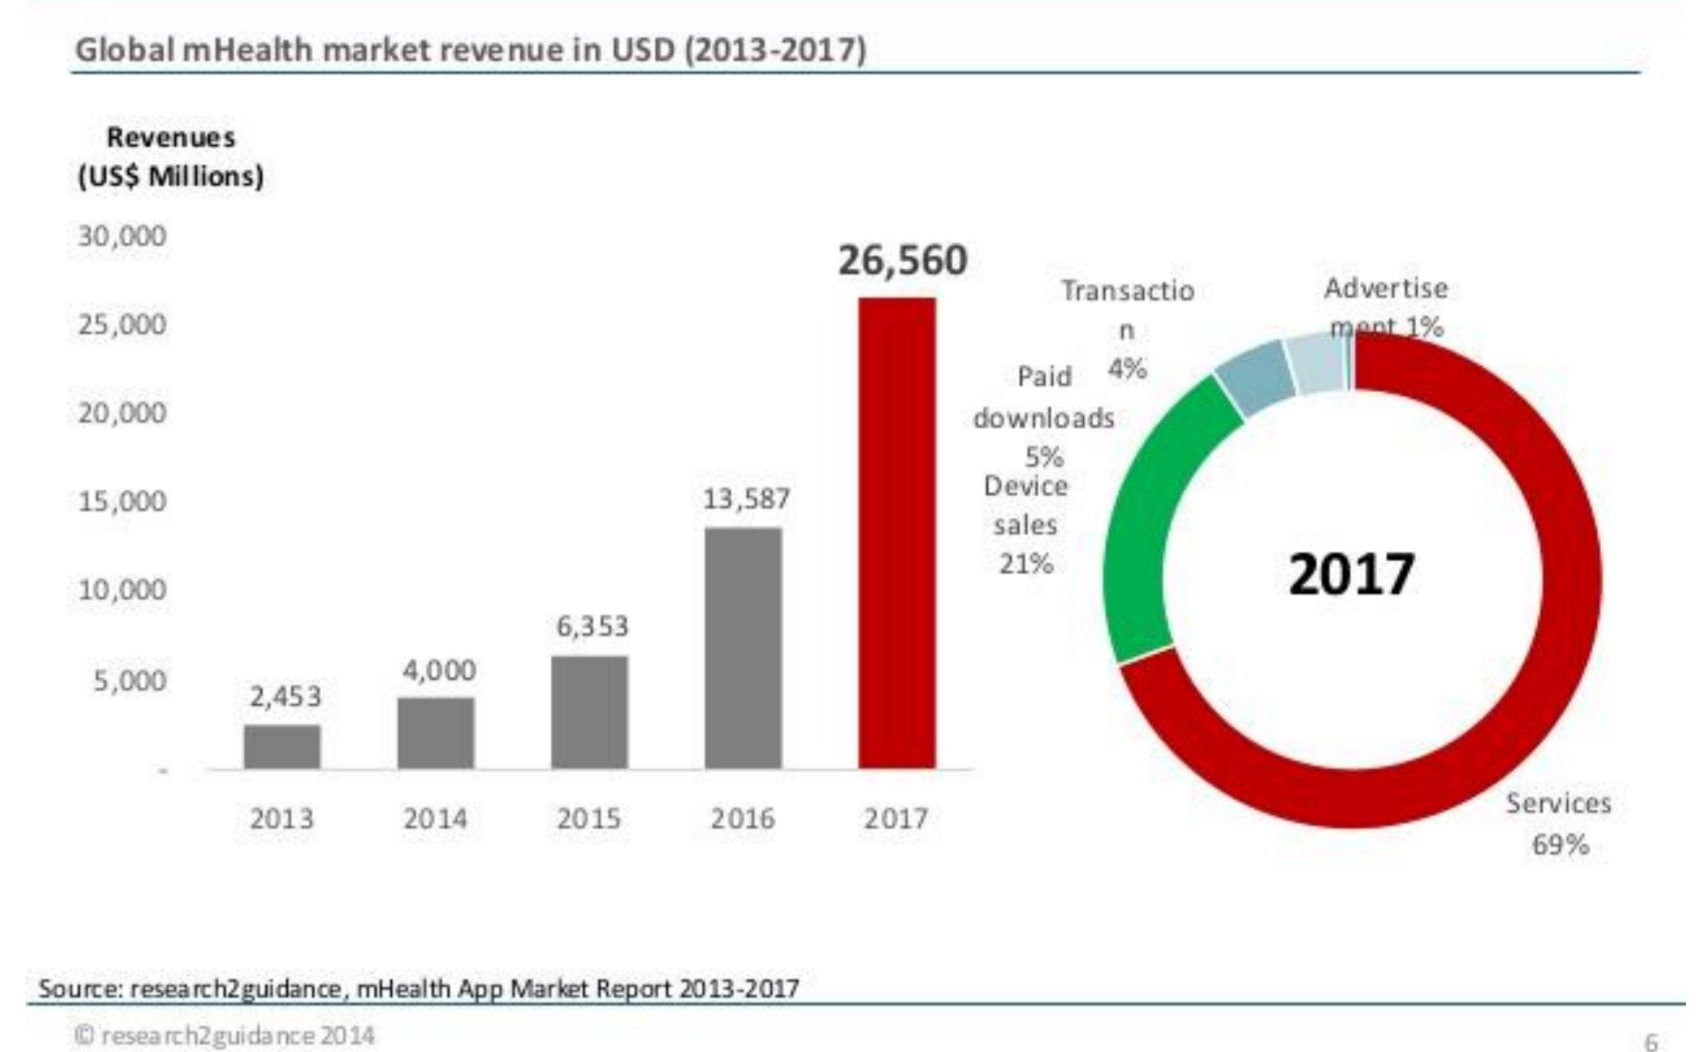

### TTP Problem

#### MOTIVATION:

1. **Lack of widely accepted mHealth solutions** that can provide improved medical care with reduced costs. Weakness of current solutions - **majority of attention is focused on the technology.**
2. Acceptance of mHealth solutions can greatly be increased by an **extensive involvement of users and their caregivers.**
3. **High added value** and great market potential of mHealth products, services and networks.

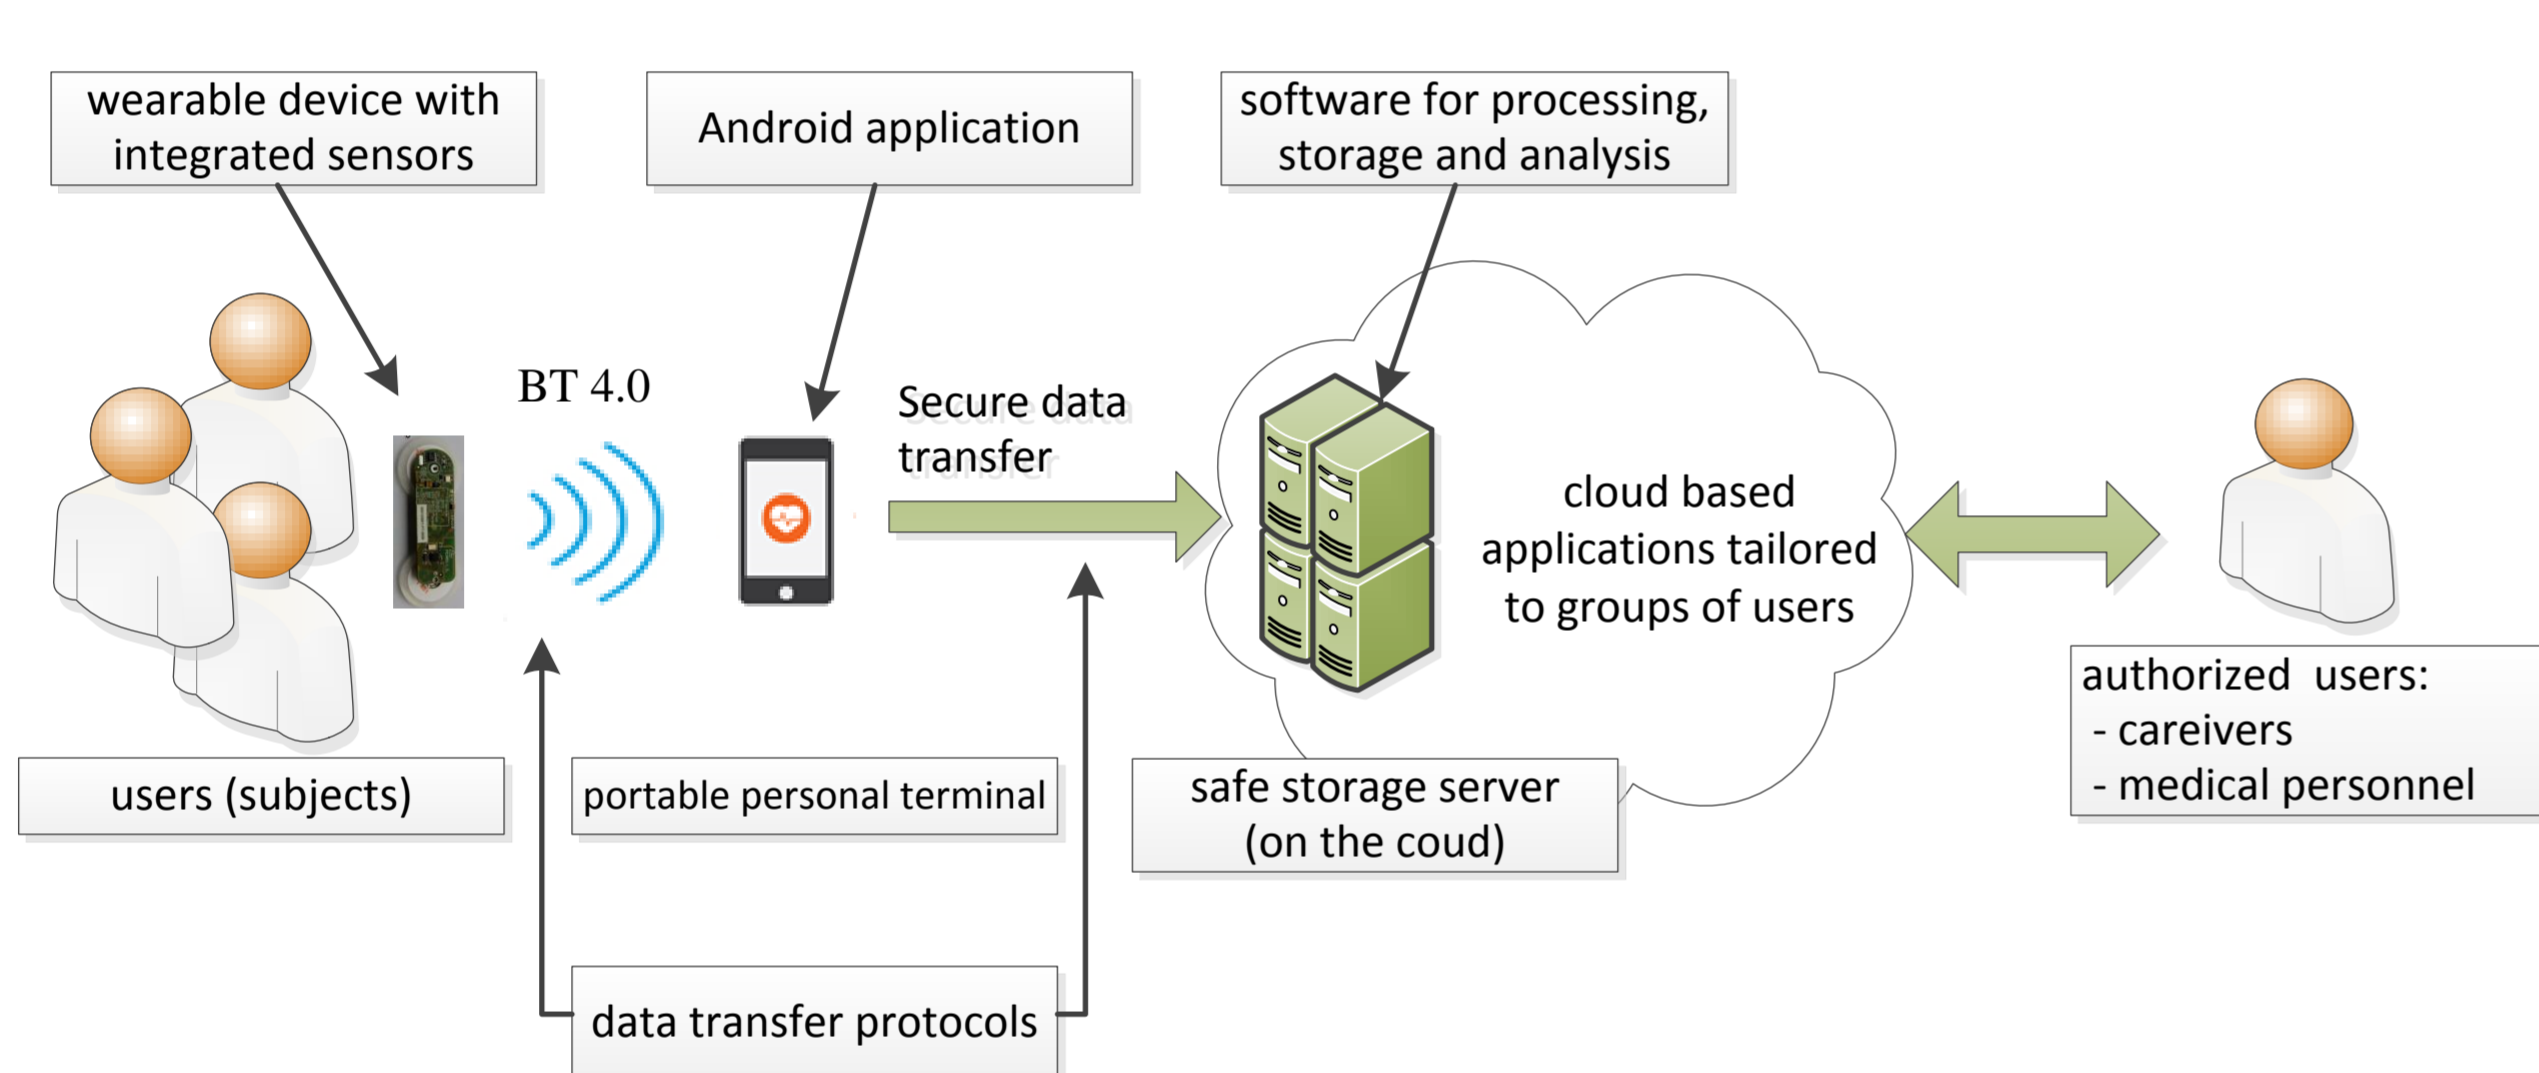

The developed system must be CE certified as a medical device, before commercialization, which represents a significant effort in terms of investment and human resources.

#### The mHealth app market will reach USD 26bn revenue by 2017

### TTP Solution

#### Technology platform for follow-up of patients

#### Personal computer software for processing & analysis

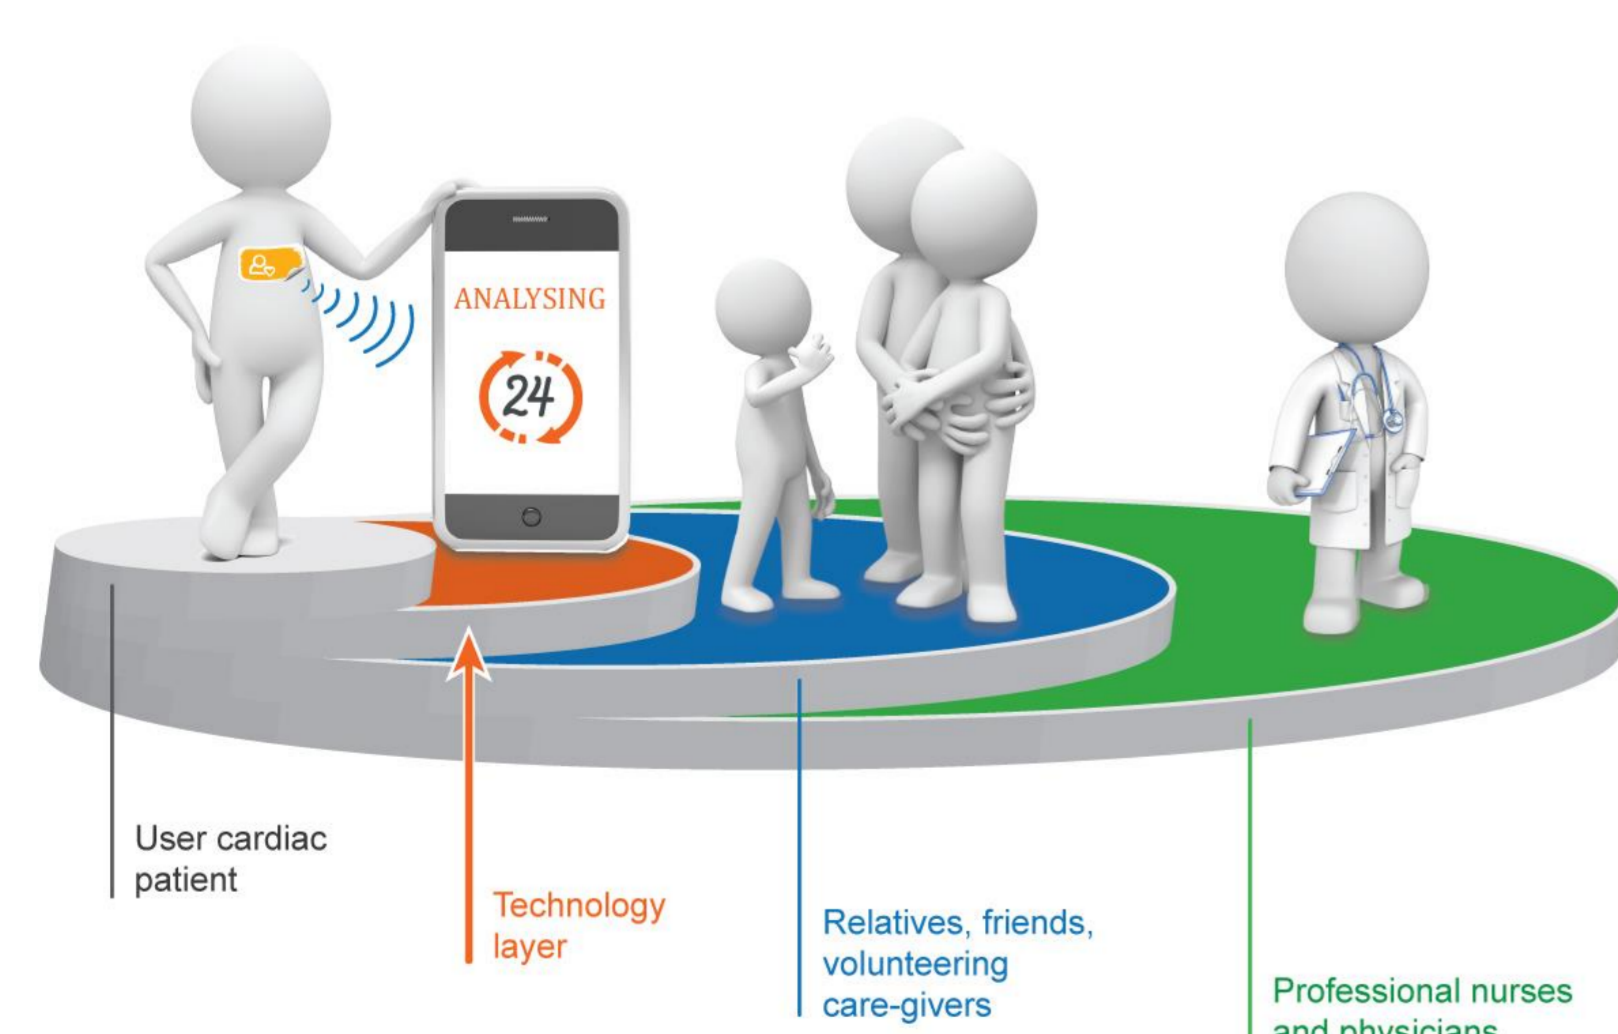

- Measured ECG channel (red curve) & detected individual heart beats (blue x-es)
- The example shows atrial fibrillation

### WIRELESS BODY SENSOR EVOLUTION

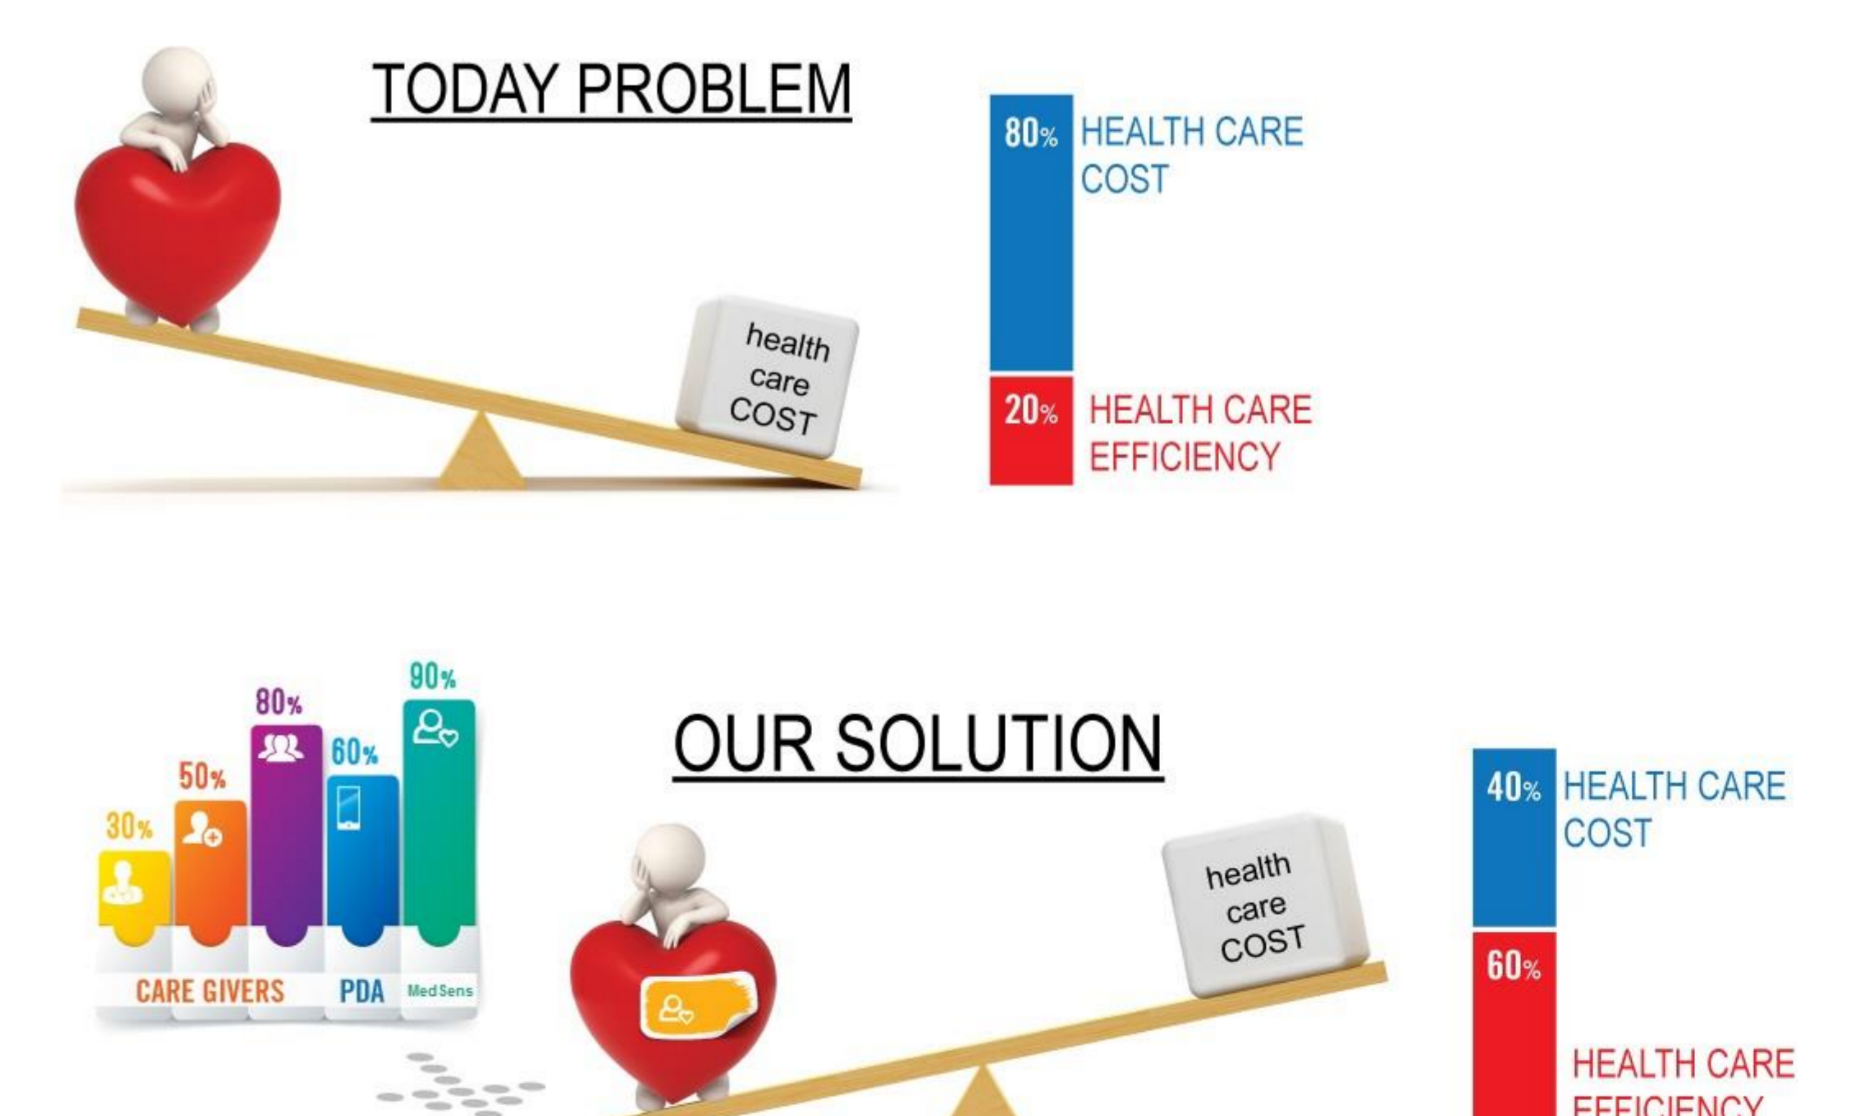

### TTP Impact

#### The technology layer supporting patients and their caregivers

- **MedSens will also:**
  - **save energy & user's time,**
  - **open new jobs** for supporting users and medical personnel,
  - **increase the opportunities** for the industry in development, testing and marketing of new ICT supported health products.

#### Increased health care efficiency & Reduced health care costs
